CHECK OUT MY Fully Interactive Portfolio!

Summary

I'm an experienced Senior Mobile Application Developer with a graphic arts background who specializes in rapid prototyping & building Apps.

For specific examples, see my interactive portfolio at jeffglover.com

Experience Highlights

Swift / iOS Developer
ABH.CARE

December 2025 - Present

Tebra API Portal for Patient & Providers for appointment and patient management.

This is a bespoke client app written specifically for Alpha Behavioral Health's providers and patients.

It consists of two parts: a Node API that handles communications with Tebra's API and the App that interacts with the node API.

Hosted on GCP Cloud Run with a Cloud SQL Database, the API is deployed via CI/CD from GitHub and the app is deployed through Apple's Cloud Build.

Swift / Android Developer
Liquor.com

November 2024 - December 2025

Take control of your career. Self-manage and self-mentor like a boss

I was brought on board to take the bare-bones MVP to a full-fledged iOS App.

CountrPT is an AI Tool for helping you document day-to-day tasks and use that to plan your one-on-one meetings and performance reviews.

I was the sole developer for iOS who ported my code to JetPack Compose for the Android Team. I also wrote APIs with JWT Auth, and built deployment scripts for GCP Cloud Run & VM Instances.

Swift / iOS Developer
1Glance.app

January 2021 - Present

Transforming your TV into a Dynamic Information Hub with AppleTV

Designed and built an iOS app that allows a person to build dynamic screens for their AppleTV. These screens can be manipulated in real time on any TV using AppleTV.

In keep with my less dependencies the better, there is a single one for Firebase that handles the Auth and Storage for the user's data.

This was my first app which I continue to develop and support in my spare time. It keeps me sharp and up to date on new tech.

Senior Web Developer
Liquor.com

January 2012 - February 2020

Liquor.com is the premier online site for all things booze and cocktails

Senior Engineer supporting a team of over several content producers using WordPress on a customized LAMP Stack with extensive jQuery/Javascript/PHP.

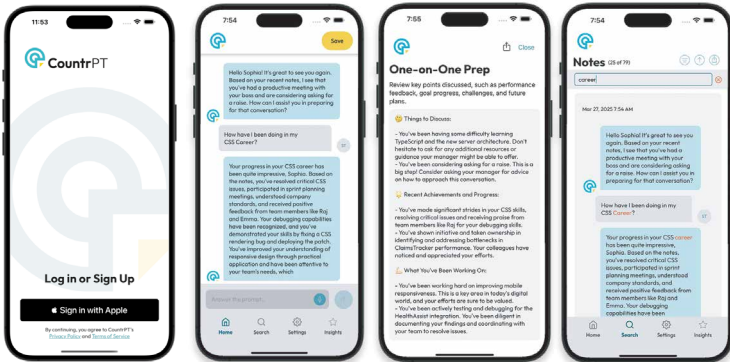

Tasks include rapid prototyping web portals for clients, building custom content plugins for WordPress, and enhancing existing architecture.

Middleware included Jira, GitHub, and AWS for server building, staging, and deployment.

Mobile Development Highlights

iOS Development

XCode & Swift

I have been developing Applications for several years in XCode & Swift. I strive for a zero-dependencies for security and code hygiene. I use VSCode as my editor and GitHub for source code management. I coded long before AI was a thing, which means I actually understand what I'm building. I use AI to accelerate my coding... not to generate code I can't explain.

1Glance

1Glance is an iOS and tvOS app built with Swift that lets users create and manage screens for Apple TV.

It uses Firebase for authentication, Firestore for data, and Cloud Storage for images, with Firebase App Check for security. In-app purchases and subscriptions are handled with StoreKit 2 and RevenueCat, and authentication supports Sign in with Apple & Email/Pass.

The app integrates WeatherKit, AccuWeather, Mediastack, and the New York Times API for weather and news, plus iCalendarParser for calendar data, and uses Combine for reactive data flow.

Code SwiftUI (iOS and tvOS)

Auth Sign in with Apple & Email/Password

Stack Firebase - Auth, Firestore, Cloud Storage, App Check

Tech StoreKit 2, RevenueCat, WeatherKit, AccuWeather, Mediastack, NYT API

Android Development

Android Studio & Jetpack Compose

CountrPT

CountrPT is an AI Tool for helping you document day-to-day tasks and use that to plan your one-on-one meetings and performance reviews.

I wrote the entire App in iOS, then ported my UI/UX Design and elements over to Jetpack compose so the app was consistent between iOS and Android. This created a visual cohesiveness that you almost never see between multi-modal apps.

The app integrates a voice-to-text feature connected with a custom Node API that integrated with AI Agents to create a bespoke platform for self-reflection and career management.

Code Jetpack Compose (Android)

Auth Email/Password

Stack GCP- Node, JWT Auth, PostgreSQL, Next.js, React, TypeScript, Cloud Run, Cloud SQL

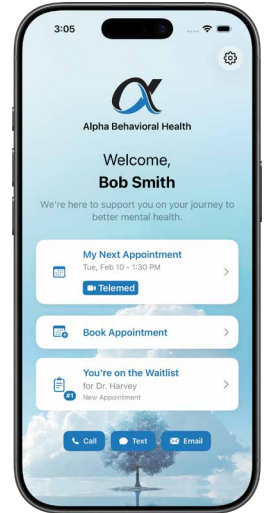

Tech AI Agents, Android SpeechRecognizer / voice-to-text

ABH.CARE

ABH.CARE is a behavioral health app for patients and providers. Patients can sign in and manage appointments, while providers can view schedules and daily appointments.

The iOS app is built with Swift, using async/await and Combine. It supports secure login with JWT tokens, Face ID, Apple Sign-In, and phone verification, and includes a home screen widget for appointment info.

The backend uses Node.js and Express with PostgreSQL, plus JWT auth and refresh-token handling. It also integrates with Tebra/Kareo and Twilio, and is deployed with a CI/CD w/GitHub & Google Cloud Run.

Code Swift (iOS)

Auth Sign in with Apple, Email/Password, Phone Number

Stack GCP - Node, JWT Auth, PostgreSQL, Next.js, React, TypeScript, GitHub CI/CD to GCP Cloud Run, Cloud SQL

Tech WidgetKit, Keychain, Twilio Verify
